VII.	Pressing on Toward the 1980s	41

Introduction

In any historical appreciation of Marine Corps Aviation, there are two factors which make Marine Aviation unique. The first is the close relationship between Marine and Naval Aviation, and the second is the unchanging objective of Marine Aviation to provide direct support to Marine ground forces in combat.

One of the reasons for the partnership between Marine and Naval Aviation is the commonality which they have shared since their very beginnings. Both are under the umbrella of the Department of the Navy and there is an interlocked approach to planning, budgeting, procurement and operations, at all levels from Washington to the major fleet, field and base commands. All aviators of the naval establishment, whether Marine or Navy, are trained in the same training commands, in the same equipment, and by the same instructors and technicians, under the same syllabi. This adds up to the closest bond between two major air forces.

The second factor — the basic objective of Marine Aviation: to support Marine Corps operations on the ground — speaks for itself. While there have been a few variations in some aspects of Marine Aviation planning, there has never been a departure from this objective.
